

Senior Audio Engineer

NIKHIL YADAV

Senior Audio Engineer and Voice AI Specialist with 5+ years of experience in full-pipeline audio production, voice-driven content, and AI audio integration. Deep expertise in voice characteristics, timbre analysis, clarity optimisation, and custom voice creation using ElevenLabs – including source audio preparation, cloning pipeline setup, and iterative voice refinement for professional client delivery. Proficient in Pro Tools, Logic Pro X, Reaper, and Adobe Audition, with hands-on experience in audio restoration using iZotope RX and Adobe Podcast Enhance. Experienced in client-facing audio production, translating ambiguous creative briefs into polished audio solutions, and providing technical guidance on AI audio tools. Adept at managing high-volume, deadline-driven workflows with strong organisational discipline.

EDUCATION

BACHELOR'S DEGREE

Asian University of Manipal, 06/2022 - 04/2025

First grade achieved in modules including:

Music History, Theory, Composition

Diploma Degree

Audio Life College of Audio Engineering,
06/2021 - 04/2022

Dissertation: "The use of DAW for production and sound design, Importance of Acoustics for Audio Engineering, Mic techniques, middleware like Wwise, Fmod, Unreal Engine. Importance and various uses of Foley for post-production and dubbing, Adobe's Audition.

EXPERIENCES

Senior Audio Engineer

Pocket FM, India 05/2023 - Present

- Delivered end-to-end audio production for high-profile titles including Saving Nora, The Alpha's Bride, King of Dragon, Heart of a Phoenix, Berlin Crime, and Sylt Crime – ensuring each series met professional broadcast standards and a consistent sonic identity.
- Created and refined custom AI voices using ElevenLabs for narrative audio projects: prepared and cleaned source recordings to optimise cloning quality, iterating on voice profiles to achieve consistent timbre, clarity, and performance nuance across episodes.
- Acted as primary client-facing audio contact for international production partners – translating ambiguous creative briefs into precise audio and voice-design solutions, managing expectations, and delivering structured feedback through revision cycles.
- Prepared and processed audio for dubbing workflows: cleaned source dialogue, aligned timing, and ensured translated voice content met the tonal and performance standards of the original across 15+ language outputs.
- Provided hands-on technical guidance to producers, writers, and junior engineers on ElevenLabs tools, voice preparation best practices, and AI audio generation workflows – improving team-wide output quality and reducing revision cycles.
- Applied iZotope RX for advanced dialogue repair, noise reduction, de-clicking, and spectral editing on voice-driven content, restoring problematic recordings to broadcast-ready quality before voice cloning or final delivery.
- Used Adobe Podcast Enhance to clean and enhance remotely recorded voice content, significantly improving intelligibility and consistency across sessions with varying recording environments.
- Conducted systematic audio quality labelling and evaluation: scored hundreds of voice assets across clarity, timbre consistency, noise floor, EQ balance, and dynamic range – providing structured feedback that directly informed production and AI pipeline decisions.
- Evaluated and refined AI-generated audio drafts – identifying artefacts, tonal mismatches, unnatural pacing, and spectral anomalies using a structured QA checklist before final delivery.
- Designed and implemented soundscapes, original music, ambience, and SFX for voice-driven content, ensuring seamless interaction between dialogue, music, and sound design.
- Managed session organisation, stems, version control, and documentation to support fast revisions and reliable delivery under tight deadlines.

ELEVENLABS & AI VOICE WORKFLOW

Hands-on experience with ElevenLabs and complementary AI voice tools in professional production contexts:

- Custom voice creation & cloning: preparing source audio (noise removal, silence trimming, normalisation, quality grading), uploading and configuring voice profiles, and iterating on output to achieve target timbre, clarity, and performance nuance.
- Voice generation & synthesis: generating dialogue and narration using ElevenLabs for narrative audio pipelines; reviewing, editing, and refining AI voice outputs for tonal consistency and natural pacing.
- Audio quality labelling: systematic scoring and annotation of AI-generated voice assets across quality dimensions (clarity, naturalness, artefacts, emotional alignment) – providing structured human feedback to improve model outputs.
- Dubbing workflow support: preparing and cleaning source audio for multilingual dubbing pipelines; ensuring timing alignment and tonal consistency across dubbed outputs in 15+ languages.
- Client training & guidance: providing hands-on technical guidance on ElevenLabs tools, voice preparation workflows, and AI audio best practices to producers and creative teams.
- Prompt engineering for voice generation: developing and refining generation settings and prompts for consistent, brand-aligned voice outputs across long-form serialised content.

EXPERIENCES

Freelance Sound Designer — Games, Film & Interactive Media

03/2022-04/2024

- Delivered bespoke audio solutions directly to independent game studios and creative clients – briefing, designing, and revising SFX, soundscapes, and voice assets to meet client specifications.
- Designed creature voices and synthetic vocal assets using layered recordings, DSP processing, and granular synthesis; prepared clean source audio for AI voice generation and cloning workflows.
- Implemented audio assets in Wwise and Unity including RTPCs, states, switches, and interactive music logic; supported small teams with audio pipeline setup and engine integration.
- Performed final quality control across devices and formats, verifying assets met professional standards for balance, levels, loudness, and playback consistency before client delivery.
- Maintained highly organised Pro Tools sessions, stems, and documentation to support fast revisions, clean handoffs, and scalable production.

email: nikhilyadav3172@gmail.com

address: New Sangavi, Pune, Maharashtra, India-411027

Skills

- DAWs & Editing: Pro Tools · Logic Pro X · Adobe Audition · Reaper
- AI Voice & Restoration: ElevenLabs (voice creation, cloning, generation) · iZotope RX Series · Adobe Podcast Enhance · Suno · Udio
- Voice & Audio Disciplines: Custom Voice Creation · Timbre & Clarity Analysis · Dialogue Editing · Dubbing Audio Prep · Sound Design · Foley · Waveform & Spectral Analysis · EQ & Signal Processing · Mixing & Mastering · Field Recording · Music Composition
- Technical: Audio Quality Labelling & Annotation · Noise Reduction · Audio Format Compatibility · Session Management · Version Control · Middleware: Wwise · Fmod · Unity
- Client & Workflow: Client-facing Delivery · Creative Brief Translation · Technical Guidance & Training · Fast-paced Deadline Management · Structured Feedback Communication · Team Leadership

Achievements

- Promoted to Senior Audio Engineer within 2 years for consistent delivery, client satisfaction, and technical excellence.
- Delivered audio production and AI voice integration across 6 high-profile OTT titles spanning romance drama and crime thriller genres, each meeting professional broadcast and platform loudness standards.
- Successfully managed multiple concurrent high-volume audio production projects with strict client turnaround schedules across narrative audio and game audio formats.
